

## Week of April. 25th

This week, I met with my team to discuss and do the elevator speech video.

Also, I analyzed the best state management approaches for our APP, and I found that for our mobile application we will use MVVM because that software architectural pattern will help us with the scalability and maintenance of the app. To do this architectural pattern on the app, I will use two packages that will help me to develop the app:

[https://pub.dev/packages/get\\_it](https://pub.dev/packages/get_it)  
<https://pub.dev/packages/provider>

I read and reviewed again this article that teaches me how to design your app that is built with Flutter with MVVM architectural pattern.

### **State Management With Provider**
